# Description of the relationship implemented in the MySQL Generic Canvas library

Note: there are two documents due to the used tools. One is a MS Office doc file, which is used as primary source document and an Adobe pdf file that is a simple export of this doc file for machines, which do not have MS Office installed.

Legend:

If no cardinality is given then it is 1. Otherwise a number gives the exact cardinality; a star stands for zero-or-more, a plus for one-or-more and a question mark for one-or-zero.

Object manages other object

Object references other object

Other object is a derivation

Not yet implemented

Note: Not drawn here are all back references to the model. Every element, which is managed by the model, also holds such a back reference.
